MINI PROJECTS

Phone number info gathering with python

When we give any mobile number with the country code then we will get some basic information regarding that number

Conversion of temperatures with java

conversion of temperatures like Celsius to Fahrenheit, and celsius to kelvin etc..

Creating a virtual phone numbers

by using this we can create fake accounts on WhatsApp, telegram, imo, instagram etc..

phishing attack

by using the termux create a link when the victim clicks on that link he will able to see a fake login page. when the victim enter their credentials we get that info

creation of web pages

created web pages and host those online. like to-do-list, login page
